# Smart Inspection Industry Sharing 2024

17 April 2024

## A&I Future of the Built Environment

The envisioned future of the built-environment is **digitalised and data driven**, enabling both the industry and public agencies to tap on digital platforms to **enhance safety and improve productivity.** 

Preventive

Intervention

E.g. data can be used to analyse and identify potential areas to make data-driven decisions

#### Real time response

E.g. CCTV, sensor, 360 Capture could be deployed to record a digital twin of the building or site

#### Predictive Analysis for efficient resource deployment

E.g.. Focusing resources on areas that are of highest risk

Bu

# **Site Management Platforms**

## A&I Site Management Platforms (SMP)

What if we can move away from this ...

### To this $\nabla$ Q Layer Piling drawings 🔻 Pile #368 axis C-1 Gio Gonzales Open Concrete Cube Test My Actions Select Module Create New S Defects Forms Inspections iii Dashboards Assignees

#### 5

Site Management Platforms can consolidate data from the site to

Improve collaboration and communication between stakeholders

Improve integrity of data recorded on site

Streamline administration and documentation processes

Provide an overview of the site and improve supervision

## A&I

## **Integration of SMP systems**

SMP

SMPs need not be a single system used by the site and its stakeholders, but can be multiple systems integrated with each other. SMP environment should be accessible to project stakeholders to encourage collaboration and data integrity.

![](_page_6_Figure_4.jpeg)

Systems used by data upstreamers like I&M companies and material testing labs can also be integrated with SMPs to streamline data flow.

#### Data Upstreamers

e.g. I&M, Material Labs

Structured Data

## A&I

### Common Site Management Data Standards will facilitate data submissions to both public agencies and clients

![](_page_7_Picture_2.jpeg)

### Buildiss # SITE MANAGEMENT DATA STANDARDS

For Data-Driven Project Performance Monitoring and Benchmarking

![](_page_7_Figure_5.jpeg)

Pre-release | Published on 17 April 2024

Pre-release | Published on 17 April 2024

Site Management Data Standards (Pre-release)

- Datasets serving both **regulatory and project management needs**
- Grouped into safety, productivity, quality, time and cost categories
- Site management platforms should take reference from the Standards

	Site Management Data Standards					
	Safety (Pre-release)	Productivity (Pre-release)	Quality (Next Release)	<b>Time</b> (Next Release)	Cost (Next Release)	
Regulatory Data Requirements	Workplace Safety and Health	Construction Productivity	CONQUAS	Not required by regulators		
	Structural Safety					
Project Delivery Data Requirements	Public/Private-sector Clients & Contractors					

Available for industry feedback at go.gov.sg/datastd-feedback

![](_page_7_Picture_13.jpeg)

Download Data Standards from

go.gov.sg/datastd

![](_page_8_Picture_0.jpeg)

The first Guidebook for Site Management Platforms Part A – For Solution Providers

- Focus on **Structural Safety data** as per BCA's requirements
- For <u>solution providers</u>, the guidebooks helps to layout the requirements and data standards to prepare the necessary modules
- For <u>industry practitioner</u> can embrace the guidelines and transform their internal processes to become more efficient

**Other Guidebook for Site Management Platforms in the pipeline** 

Part B – Case Studies and Best Practices for Industry adoption of SMP

Part C – Change Management Best Practices SMP Adoption

![](_page_8_Picture_10.jpeg)

![](_page_8_Picture_11.jpeg)

![](_page_9_Picture_1.jpeg)

Solution providers can refer to the SMP Guidebook to set up the necessary modules to facilitate the collection, validation and storage of the required structural safety data on SMPs

![](_page_9_Picture_3.jpeg)

**Requirements on the data to be kept on SMP** (aligned to regulatory needs) In Structured Data Format In **Unstructured Data** Format i.e. can be stored in columns and rows e.g. PDFs, photos, videos, reports **Examples: Examples: QP & Site Supervisor Attendance BCA Approved Plans** Records **Piling Installation Records** ٠ COS & PE Calculation report) **Concrete Cube Test Results** Pro-con Survey Report Instrumentation and Monitoring ٠ 360 Captures Records **ERSS Annex C-1** . These data requirements will be covered under Site Management **Data Standards** 

Temporary Building Design (with

![](_page_9_Picture_6.jpeg)

#### A&I **Data Standards for Regulatory purposes**

SMP Guidebook Part A focuses on structural safety data for regulatory needs. Solution providers should work with clients for their preferred workflow or additional data requirements and meet their needs.

For example:

![](_page_10_Figure_4.jpeg)

Solution providers are also encourage to customise the forms to the clients' needs, as long as it is able to generate the data that BCA requires in the standards we have specified

![](_page_10_Picture_6.jpeg)

## A&I What you can look forward to for SMP

![](_page_11_Picture_1.jpeg)

### Adopting SMPs and the modules/data standards required will

- Improve site supervision
- Improve efficiency
- Reduce touch points with BCA during structural audits

## Reach out to us!

To opt into having your structural audits carried out digitally or provide feedback to our guidebook

# **Virtual Inspections**

![](_page_12_Picture_1.jpeg)

![](_page_12_Picture_2.jpeg)

#### A&I **Virtual Inspection For TOP**

![](_page_13_Picture_1.jpeg)

#### What if we can move away from this ...

![](_page_13_Picture_3.jpeg)

Inspections are usually manpower intensive involving many parties

![](_page_13_Picture_5.jpeg)

![](_page_13_Picture_6.jpeg)

![](_page_13_Picture_7.jpeg)

Project Team can capture 360 scan and compliance photos

**To this** 

The Capture can be reviewed anytime, anywhere without ٠ the need to go down to the site

#### Note

- The areas sampled and items checks are what already being done in physical inspections.
- There is no difference for a virtual or a physical inspection.

![](_page_13_Picture_13.jpeg)

## **Benefits For Virtual Inspection**

![](_page_14_Picture_2.jpeg)

Recording inspectors' comments on loose paper and sending different instructions through whatsapp and emails

Gathering all subcontractors and following the inspector.

![](_page_14_Figure_5.jpeg)

![](_page_14_Picture_6.jpeg)

Better coordination

and documentation

Queueing to find a booking slot and waiting for the written comments after inspections

![](_page_14_Picture_8.jpeg)

Faster overall Process with reduced waiting time

#### Other beneficial use case

Industry have been using 360 capture for

- Checking of project progress
- QA/QC checks
- As a collaborative platform to discuss and update

![](_page_14_Picture_15.jpeg)

![](_page_14_Picture_16.jpeg)

Different projects have successful completed the virtual inspection

![](_page_14_Picture_18.jpeg)

The first **Guidebook for Virtual TOP/CSC**  The Guidebook is divided in 4 sections to help guide on the different processes in a virtual inspection for TOP/CSC to help answer the key questions that the industry have.

![](_page_15_Picture_4.jpeg)

![](_page_15_Picture_5.jpeg)

- Listing the requirements industry need to adopt a virtual TOP inspection
- Sharing on the best practices in using 360
   Captures for BCA TOP inspections

**Part D :** SUBMISSION AND REVIEWING OF THE 360 CAPTURE FOR VIRTUAL INSPECTION

![](_page_15_Picture_9.jpeg)

#### **ASSESSING PROJECT SUITABILITY FOR VIRTUAL INSPECTION**

inspection

TOP

Suitable features	Remarks			
Typical layouts	This enables one scan to represent more floors, reducing efforts needed to scans	<ul> <li>1) Size of the area required to be scanned</li> </ul>		
Simple layouts	Projects which are designed with large open areas that enable less steps to capture the whole project as the	<ol> <li>Conditions of the site for virtual scans</li> </ol>		
Project already using 360 Capture for monitoring	Enable more value as the same scan could be used for multiple purposes (e.g. project progress and TOP checks)	<b>Full Virtual Inspections</b> (Inspections done virtually)		
The Process		- To scan all non-Typical levels - Allowed to scan a sample of the typical level		
QP book inspection date for	P inform BCA PO to opt for virtual project's suitability	Hybrid Inspections (Selected portions are done virtually, while the remaining done		

virtually, while the remaining done physically)

**Physical Inspections** (Inspections done physically)

## A&I 360 Capture for Virtual TOP

#### **Typical levels**

 A minimum of 3 typical floors (~1 for every 10 floors) are to be selected in each building for the virtual inspection.

#### **Non-typical levels**

 To include all other nontypical floors whenever applicable

![](_page_17_Figure_5.jpeg)

As each project may differ, project teams can approach BCA to discuss on the exact areas and extend of scans required for their projects.

![](_page_18_Picture_1.jpeg)

#### **PREPARING FOR 360 CAPTURE**

At the initial phase, BCA will help to facilitate projects that do not have a platform but keen to conduct a virtual inspection.

### **360 Capture Hardware**

![](_page_18_Picture_5.jpeg)

360 cameras are widely available off-the-shelf and compatible with most 360 Capture platforms

### **360 Capture Solution Providers**

![](_page_18_Figure_8.jpeg)

Privileged/Confidential information may be contained in this document. Please do not distribute it without BCA's prior approval.

#### CONDUCTING THE VIRTUAL CAPTURE

![](_page_19_Picture_2.jpeg)

![](_page_19_Picture_3.jpeg)

Identify the areas to be scanned in the project

![](_page_19_Picture_5.jpeg)

Assigned personnel equip with 360 camera and walk throughout the project to do the scan

![](_page_19_Picture_7.jpeg)

Photos with sample measurements would need to be attached in the platform

![](_page_19_Picture_9.jpeg)

QP check through and inform BCA to review the capture when ready

#### <u>Note</u>

#### **Proper Lighting**

![](_page_19_Picture_13.jpeg)

Please ensure the areas scanned are sufficiently bright or lighting provision would need to be made

#### **Completed Site**

![](_page_19_Picture_16.jpeg)

Virtual would be like conventional inspection and the site must be captured in a TOP- ready condition

#### **QP** to check compliance

![](_page_19_Picture_19.jpeg)

QP would be responsible to ensure compliance and demonstrate to BCA through the sample measurements photos.

![](_page_19_Picture_21.jpeg)

Privileged/Confidential information may be contained in this document. Please do not distribute it without BCA's prior approval.

#### A&I **Highlights from Virtual Inspection Guidebook**

## TOP **Processing** Officer

![](_page_20_Picture_2.jpeg)

Review the submitted scans

![](_page_20_Picture_4.jpeg)

Comments would be given and tagged directly to the location

![](_page_20_Picture_6.jpeg)

Written Direction would be issued within 3 working days

![](_page_20_Picture_8.jpeg)

Concurrently, Project Team can start rectification works

Type of BCA comment	Details	QP/Project Team's reply
Non-Compliance	Items that are not in compliance to the	Rectified
	Approved Document and the Accessiblity	
	Code	
Observation	Any other issues that are identified from	Rectified
	the virtual site inspection	
Clarification required	When the area in the capture is blurry,	Clarification attached.
	underexposed or not easy for any user to	
	see, and thus, the provision of a photo	
	measurement to clarify will be required	

Privileged/Confidential information may be contained in this document. Please do not distribute it without BCA's prior approval.

Standardised template and fields for ease of

- Tracking of status ٠
- Finding the location of the noncompliances
- Generating closure reports

![](_page_20_Picture_16.jpeg)

## A&I Summary of Virtual Inspection Process

![](_page_21_Figure_1.jpeg)

![](_page_22_Picture_0.jpeg)

### Future of Virtual Inspections with 360 Capture

![](_page_22_Figure_2.jpeg)

#### **On-going Tech Development**

Al tools to identify non-compliances in the collected videos/photos

![](_page_22_Figure_5.jpeg)

Development of AI to

- 1. Recognize and measure elements in the 360 capture
- 2. Auto detect non-compliance

This would enable all parties to achieve significant savings

Together with the industry, build up our data to train our AI/ML models

![](_page_22_Picture_11.jpeg)

## A&I Acknowledgement

The Journey is only possible with the support from many of our industry partners. We would continue to seek the industry support to work with us to refine the processes.

![](_page_23_Figure_2.jpeg)

![](_page_23_Picture_3.jpeg)

![](_page_23_Picture_4.jpeg)

### A&I

### **Feedback on the Guidebooks**

![](_page_24_Picture_2.jpeg)

You feedback is important. We seek your comments on the guidebooks and what else you want to know. Please click the link and input your

- a) Comments and reactions to the guidebook
- b) Recommendation on what else the industry would want to know and be included in this or future Guidebooks

Build

These current drafts are for industry consultation and feedback.

Privileged/Confidential information may be contained in this document. Please do not distribute it without BCA's prior approval.
